

apexanalytix Data API Terms of Use

These apexanalytix Data API terms of use ("API Terms") define the terms that apply when you use, contact, or interact with our Data application programming interface ("API") and form a binding contract between you and us. These API Terms do not apply to your use of any of our software, website, applications, application plug-ins, solutions, or other APEX services ("Services"). Your use of the Services is subject to a separate End-User Services Agreement. Suppose additional terms apply to an application that uses the Data API, including but not limited to a SaaS Agreement, an End User Services Agreement, or any other agreement ("Additional Terms"). In that case, these API and the Additional Terms shall apply. If a conflict arises between the API Terms, the Additional Terms will prevail concerning such conflicting terms only. As used in these API Terms, API means any form of machine accessible application programming interface that provides access to an APEX service and any associated tools, including sample code that enables interactions with APEX's services, and documentation that APEX makes available under these API Terms, and includes all elements, components and executables of such API; this may expressly include APEX Archimedes™ an advanced cognitive technology system with machine learning and IBM Watson® (a registered trademark of IBM Corporation), robotic process automation, as well as third-party data sources. "Validation" means the output or results generated by the API, including all selected attributes for validation and enrichment within a Data Lookup. "Data Lookup" means the process of querying or retrieving specific data attributes for validation and enrichment purposes using the API.
